

ANANDHAKRISHNAN MR

IT Systems, ERP & AI Executive | Full-Stack Builder, AI-Assisted Development
Birmingham, England B297BN, United Kingdom | anandhakrishnanbabu@gmail.com | +44 7733846552 | [LinkedIn](#)

Electronics & Communication Engineering graduate with an MSc in Applied AI & Data Science, who has moved from studying AI and data systems to shipping them. I have solo-designed and deployed two live, full-stack systems end to end a warehouse management platform (Fast API, PostgreSQL, React) and an e-commerce platform built for a menswear retail client, including a custom admin backend, database design and role-based access control for both.

Professional Summary

IT systems and AI practitioner with an MSc in Applied AI & Data Science and hands-on experience shipping production systems solo-built a warehouse management platform (FastAPI, PostgreSQL, React) and a ecommerce site. I combine ERP/WMS operational expertise (daily inventory across 18,785 SKUs with variance held at 1–4% and experience reconciling discrepancies) with AI-assisted development, including a purchase intelligence demand-forecasting module and highaccuracy ML projects. Skilled in Python, SQL, Git and workflow automation; fast, independent learner who translates client requirements into deployed solutions and is open to relocation.

SKILLS

Windows OS Installation & Troubleshooting | PC Building | Hardware Fault-Finding | Software Updates | Device Support | TCP/IP | DHCP | DNS | OSPF | STP | Subnetting | Routing & Switching | VLANs | WAN | Access Control Lists (ACLs) | Basic Firewall Concepts | Python (Pandas, NumPy, Scikit-learn) | SQL | REST API Integration | PostgreSQL | Superbase | Cloudflare Workers | Git/GitHub (version control) | Role-Based Access Control | AI-Assisted / Agentic Development | Machine Learning (Academic) | Workflow Automation | WMS/CRM Systems (daily use) | Sales & Purchase Order Reconciliation | Inventory Data | Data Quality & Documentation | Analytical Thinking | Fast & Independent Learner | Ownership | Clear Communication | Cross-Team Training

WHAT I'D BRING TO THIS ROLE

Real full-stack, AI-assisted build experience

I've taken two projects from a blank page to a live, working system by myself — scoping requirements, designing the database and workflows, and using AI tools directly to build and ship, the same practical AI & automation mindset this role needs.

A client-facing delivery track record

The Vibe Fashions e-commerce platform was built for a real retail client, including a custom admin panel so they could manage products and stock themselves direct experience translating someone else's operational needs into a working system, not just a personal experiment.

ERP and data quality

I work inside a WMS/CRM system daily, reconciling purchase orders and stock records and holding variance within 1–4% across 18,785 SKUs the same data-quality discipline ERP administration depends on.

A genuine networking and IT infrastructure foundation

A Cisco Networking Academy internship gave me hands-on experience with TCP/IP, DHCP, DNS, OSPF, STP, subnetting, ACLs and basic firewall concepts, and I'm self-taught in installing Windows OS, building PCs and fixing hardware faults.

System integration and APIs

Both live projects connect to cloud services and external APIs Superbase storage on Vibe Fashions, and database-driven services on the WMS platform plus API-based work with financial data in my academic projects, giving me a working, not just theoretical, understanding of REST-based integration.

Training and clear communication

I've supervised and trained warehouse operatives on system and process standards, and managed customer relationships end to end in a previous sales role comfortable explaining a system to non-technical colleagues, which this role's staff training responsibility needs.

A fast, independent learner who commits

I don't have hands-on Next/Frappe, Linux or Docker experience yet, but every project on this CV is proof of picking up an unfamiliar technical stack on my own and shipping something real with it. I'm genuinely open to relocating to the UAE and building a long-term career here.

KEY PROJECTS

Vibe Fashions E-Commerce Platform

- Solo-designed and shipped a live e-commerce storefront and admin backend for a menswear retail client, hosted on Cloudflare Workers with Superbase handling cloud storage and data.
- Built a custom admin panel for managing the product catalogue, categories and stock, giving the client full control over the store without needing to touch code.
- Delivered a WhatsApp-based ordering flow matched to the client's actual sales process, along with SEO-structured product and category pages.
- Used AI-assisted development to scope, design and ship the project end to end, translating a real client's requirements into a working, deployed system.

Warehouse Management Platform

- Identified a real gap in day-to-day warehouse operations no real-time cross-check between stock scans and system records and scoped a project to close it.
- Solo-designed and shipped a live full-stack platform (Fast API backend, PostgreSQL database, react frontend) covering receiving, barcode-driven verification, location tracking and role-based access control, using AI-assisted development to build and deploy it end to end.
- Built a Purchase Intelligence module using a demand-forecasting model to flag products at risk of running low, based on sales and stock data.

ACADEMIC AI/ML PROJECTS (MSc)

AI-Driven Flood Prediction & Mapping System (Dissertation)

Combined XGBoost (99.21% accuracy, AUC 0.9998), Random Forest (99.1% accuracy, AUC 0.99) and a U-Net image-segmentation model (88.51% validation accuracy, IoU 0.70) to predict and map flood risk from a 50,000-record environmental dataset and satellite imagery, deployed via a Streamlit dashboard.

Cryptocurrency Trade Analyzer (SOLIGENCE)

Built a forecasting and clustering tool for 30 cryptocurrencies pulled via the Yahoo Finance API, using LSTM, SARIMAX, Random Forest and Prophet models (SARIMAX on BTC-USD reached 94.71% accuracy) plus PCA and K-Means clustering, deployed via Streamlit.

Cardiovascular Disease Risk Prediction

Built and evaluated Logistic Regression, KNN and Random Forest classifiers (~89% accuracy, ROC-AUC 0.92) on the Cleveland Heart Disease dataset, including outlier handling, feature engineering and Tableau dashboarding.

Tornado Safety Chatbot

Built a PyTorch-based NLP chatbot (bag-of-words, feedforward neural network, NLTK) delivering UK-specific tornado safety guidance through a desktop GUI.

Student Performance Documentation Tool

a Python CLI/menu-driven analysis tool (pandas, matplotlib) for retrieving and visualizing student performance data. Full portfolio at anandhu336.github.io.

PROFESSIONAL EXPERIENCE

Warehouse Operations Associate / Inventory Controller, Vape Supplier Ltd, UK Jun 2025 to Present

- Manage inbound deliveries of 20–25 pallets, verifying quantities against purchase orders, identifying discrepancies and liaising with the purchasing team to resolve them rather than letting them slide.
- Manage inventory operations across 18,785 SKUs, ensuring accurate stock movement, product identification and system updates.
- Maintain inventory accuracy through product scanning, stock checks, reconciliation activities and discrepancy investigations, holding stock variance within 1–4%.
- Update inventory records using CRM/WMS systems to keep stock visibility accurate across the operation, supporting reporting and audits.
- Support goods receiving processes end to end, including pallet creation, barcode validation and product traceability.
- Created an Excel-based inventory matching solution to reconcile CRM product data with barcode scanning information used daily to catch mismatches before they affect stock accuracy.
- Planned and executed stock replenishment from bulk storage to picking areas, and optimized warehouse locations and storage processes to improve space utilization and picking efficiency.
- Managed customer order fulfilment activities end to end picked, checked, labelled and prepared products for dispatch, preparing shipment labels and supporting outbound logistics for accurate deliveries.
- Worked collaboratively within a 10–15-person team across receiving, storage, replenishment, picking and dispatch, keeping information flowing accurately between roles.
- Supported fulfilment operations for major retail and wholesale accounts including Tesco, Booker (Tesco Group), Blakemore, CJ Lang and Filshill, maintaining service levels and liaising to keep stock availability and dispatch accurate.

Inventory Analyst / Supervisor, Choice Communications (Amazon Delivery Service Partner), India Sept 2018 to Jul 2020

- Coordinated inbound sorting and outbound dispatch workflows, ensuring parcels were correctly allocated to routes and information stayed accurate across the operation.
- Audited and reconciled scanned inventory against system records regularly, cutting discrepancies by 95%.
- Identified and implemented process improvements in scanning and data-entry workflows, reducing handling errors and improving throughput.
- Supervised and trained station operatives on correct process and system standards.

Senior Business Development Executive, Byju's, India Aug 2020 to Feb 2022

- Managed customer acquisition activities for educational technology products, engaging a high volume of prospects through calls, demonstrations and consultation sessions.
- Delivered product presentations to students and parents through both online and face-to-face meetings two distinct audiences requiring different communication styles.
- Achieved and exceeded sales targets through effective customer relationship management and consultative selling.
- Managed the customer journey from initial enquiry through to onboarding, coordinating information clearly at every stage.
- Developed strong communication, negotiation and relationship-building skills through sustained high-volume engagement directly transferable to training colleagues and stakeholders on new systems.

EDUCATION & CERTIFICATIONS

Solent University 2024 to 2025

MSc Applied Artificial Intelligence & Data Science

MG University 2014 to 2018

B. Tech Electronics and Communication Engineering

Google Present

Google Data Analytics Certificate

IBM Present

Databases and SQL for Data Science with Python

ADDITIONAL INFORMATION

Open to relocating

Open to relocating, Quick, independent learner, comfortable adapting to new systems and technical environments.
